

## Existing / Old Layout

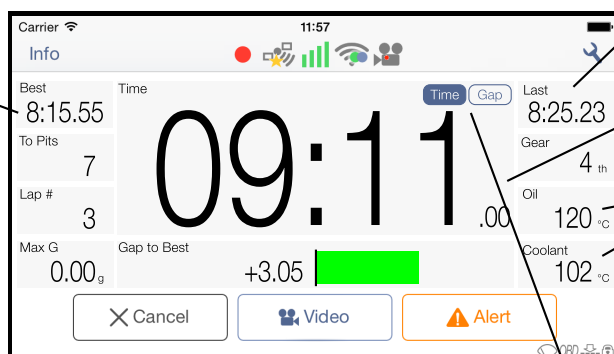

major changes

- reduction of times shown in parallel
- removal of information not relevant while driving
- no sector time display(!)
- tab bar will be removed, no hide / show arrow
- much bigger main time display
- added 'To Pits' fuel reach
- large visualization of time won / lost and winning / losing

## LapTimer v18.5 Layout

reference time and type (Best, Last...)

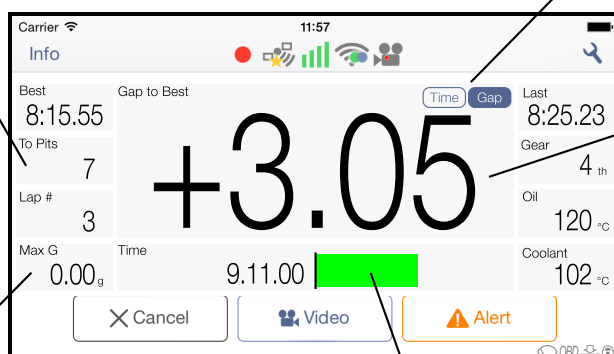

whole column is optional (depends on screen aspect ratio - 3.5' display vs. 4.0' iPhones)

shows current lap times with small hundreds (mostly to get an animation effect / action)

warning colors / colored background

warning colors / colored background (fuel tank based calculation on reach)

toggle between gap and time focussed views

main time display, continuous operation, stays for 10 seconds at lap end

colored background, mainly to provide rec-calibration option (as-is)

visualization of gap to reference:

- direction from center shows behind / ahead (positive / negative gap)
- color shows current change (winning = green / losing = red)
